

How do I change the content on my website?

We specialize in the creation of content managed websites. Such sites allow you to maintain your content through a web interface including a wysiwyg editor. You will be given a login and password which you may use to edit your content or add new pages from anywhere in the world. Site visitors will see your changes immediately. All sites will also have FTP access to the hosting server which may be used for uploading batches of images, etc. If self maintenance is something you would like to avoid, we also offer maintenance plans by the hour or on a contracted basis.
