

## Center Lake Bible Camp

Center Lake Bible Camp in Tustin, Michigan is another example of the many possibilities in a content managed website. The camp has many pages of information to be presented to visitors and they needed to be able to keep these pages up to date without the hassel of a middleman. Through the use of an online editor (standard with our content managed websites) and some simple training, the camp can make whatever changes whenever they see fit.

This site also features an online calendar, an extensive downloads section named Forms and Brochures allowing visitors to download and print PDF documents just as they were meant to be seen. The integrated photo album allows Center Lake to post photos during each week of summer camp allowing families of those attending to enter a password and browse the pictures from the week.

A online forms component allows Center Lake to gather responses to registrations and surveys saving the results as in a spreadsheet for use around the office. They also plan to add Paypal as an online payment option for select events at the camp.
